

GENAI ENGINEERING PROGRAM

From your first line of Python to a deployed, production-grade AI application. Learn to build LLM apps, RAG pipelines, and autonomous agents on the modern GenAI stack — live, mentor-led, and built entirely around what you ship.

Everyone Uses AI. You Will Build It.

Why GenAI Engineering is the Highest-Leverage Skill in India Right Now

Every company in India is adopting AI. Almost none of them have the engineers to build it. The tools are public, the APIs are open, and the demand is exploding — but the number of people who can turn an LLM into a working, deployed, production system is a fraction of what the market needs. That gap is your opportunity.

1 Million+

AI-related job demand in India crosses 1 million roles in 2026 — while only about 16% of the country's IT professionals are AI-skilled today.

NASSCOM; Ministry of Electronics & IT

51.9% CAGR

India's generative AI market is growing faster than the global average — projected to expand from \$2.2 Billion in 2025 to \$41.5 Billion by 2030.

MarketsandMarkets, 2026

₹8–15 LPA

Freshers with documented GenAI and LLM project experience negotiate ₹8–15 LPA at product companies — against ₹5.8–8 LPA for generalist freshers with no portfolio.

Industry salary analysis, 2026

40%

Of Indian employers now prefer demonstrable AI skills and certifications over a degree when hiring — a structural shift toward proof of work.

NASSCOM–Indeed AI Talent Report, 2026

What is Driving This Demand?

The GCC Hiring Wave

Global Capability Centres in Bengaluru, Hyderabad, and Pune are being set up specifically to hire Indian AI talent — and they pay 40–70% more than IT services firms for the same experience.

Enterprise AI Goes Mainstream

BFSI, healthcare, logistics, and e-commerce firms are building internal AI teams from scratch. Most had no existing talent pipeline to draw from.

The Supply Cannot Keep Up

India's AI talent pool is projected to reach 1.25 million by 2027 — but the AI market is growing at 25–35% annually, widening the gap rather than closing it.

"India's AI talent pool is expected to grow from 600,000 to over 1.25 million by 2027, at 15% CAGR. But the Indian AI market is expected to grow at 25–35% during the same period — signalling a demand-supply gap in the talent pool."

— NASSCOM–Deloitte India, Advancing India's AI Skills

Everyone Uses AI. Almost Nobody Can Build It.

Ten lakh people opened ChatGPT this morning. A few thousand can build a system that reasons over a company's own data, plans a task, and stays live in production. Both write "AI" on the resume.

WHAT MOST PEOPLE DO

- Open ChatGPT, type a prompt
- Copy the output, paste it into work
- Write "AI Skills" on the resume
- Compete with 10 lakh people

This is a user.

WHAT COMPANIES PAY FOR

- ▶ Build systems that reason over company data
- ▶ Design agents that plan, call tools, complete tasks
- ▶ Evaluate, monitor, and cut cost in production
- ▶ Ship it live — and own it when it breaks

This is an AI Engineer.

The distance between these two columns is this program.

What an AI Engineer Actually Does

Not a researcher. Not a prompt writer. An engineer.

Builds LLM Apps

Business problem →
working product, not a
demo

Answers From Real Data

RAG over documents,
databases, and live APIs

Designs Agents

Plan, call tools, self-
correct

Ships to Production

FastAPI, Docker, cloud,
monitoring

Is This Program For You?

Built for beginners. Designed for engineers. Python starts from line one.

College Students

Graduate with deployed AI applications, not just a degree and a DSA sheet.

Best for: 2nd–4th year, any branch

Fresh Graduates

You have the degree. This gives you the proof that you can build.

Best for: Graduates chasing a first technical role

Early-Career Developers

You already code. AI engineering is where that base pays off fastest.

Best for: 0–2 years experience

Service-to-Product Switchers

Stop maintaining legacy code. Product companies hire engineers who ship AI.

Best for: Service-based IT professionals

Eligibility at a Glance

Qualification

Graduation — any stream

Prior Knowledge

None — Python from scratch

System

8GB RAM & stable internet

"I am from a non-CS background. Can I still do this program?"

Yes. Python starts from zero, and every concept builds on the last.

CERTIFICATION

**SKILLS**

Microsoft

Programme Highlights

Live AI Labs

Hands-on lab environment from Day 1 — no setup pain.

Modern GenAI Stack

LangChain, LangGraph, RAG, MCP, LLMOps, Docker, AWS.

Build Every Week

Every module closes with a working build you wrote yourself.

Production Capstone

Three weeks. One deployed AI application. Live URL.

Mentor Project Review

Your code reviewed by practising AI engineers, not graders.

Recognised Certification

PW Skills + NSDC — Microsoft co-branded on Premium.

How the Programme is Delivered

1

Step 1 — Learn

Live weekend sessions with your mentor

**2**

Step 2 — Build

A working project after every module

**3**

Step 3 — Ship

Deploy the capstone. Defend it in interviews.

What You Will Walk Away With

120+ hours across 9 modules — building the exact skills companies test for in AI engineering interviews.

Python for AI Engineering

From print() to OOP and project structure.

LLM Application Development

Prompts, chains, memory, structured outputs, function calling.

RAG Pipelines

Make models answer from real documents and databases.

Advanced Retrieval

Hybrid search, re-ranking, context compression.

Agentic AI with LangGraph

Agents that plan, call tools, and self-correct.

MCP Servers

Build and orchestrate your own Model Context Protocol servers.

Evaluation & Observability

Trace, score, and debug AI systems with LangSmith and RAGAS.

Cost & Latency Control

Caching, model routing, and the economics of production AI.

Production Deployment

FastAPI, Docker, and live deployment on AWS.

"Every skill on this page maps to something you build with your own hands. You are not collecting topics — you are assembling a toolkit."

Foundations

Modules 0 to 3 · Weeks 1 to 9 · From `print()` to your first AI application.

MODULE	WEEK	MODULE NAME & DESCRIPTION	YOU BUILD
0	1–4 <i>24 hrs</i>	Python for AI Engineering Variables, data structures, functions, OOP, file handling, project structure. Then Streamlit, Pandas, NumPy.	AI Utility Dashboard in Streamlit
	5–6 <i>12 hrs</i>	AI & LLM Foundations AI vs ML vs GenAI. Transformers and attention. Tokens, embeddings, context windows. Responsible AI, hallucinations, prompt injection, guardrails.	Hallucination & bias audit of real LLM outputs
2	7 <i>6 hrs</i>	Working with LLMs OpenAI SDK, Gemini API, Hugging Face, Ollama. Temperature, top-p, streaming, structured outputs, function calling. Cloud vs local.	Multi-Model AI Playground
3	8–9 <i>12 hrs</i>	AI Apps with LangChain Chat models, prompt templates, output parsers, chains, LCEL, Runnable, memory, session handling.	AI Resume Reviewer + chatbot with memory

9 Weeks · 54 Live Hours · 4 Projects Shipped — before you touch RAG.

The Differentiator

Modules 4 to 8 · Weeks 10 to 21 · Where most courses end, this one gets serious.

MODULE	WEEK	MODULE NAME & DESCRIPTION	YOU BUILD
4	10–11 12 hrs	Retrieval Augmented Generation Indexing, retrieval, chunking, FAISS, ChromaDB, metadata filtering. Then hybrid search, multi-query, re-ranking, context compression, vectorless retrieval.	PDF Q&A bot — upgraded and benchmarked
5	12–13 12 hrs	Agentic AI with LangGraph Agent architecture, nodes, edges, state. Sequential, conditional, parallel, iterative workflows. Tool calling, human-in-the-loop, memory, planning, reflection.	Multi-agent research assistant
6	14–15 12 hrs	Model Context Protocol (MCP) MCP architecture, lifecycle, clients, servers, resources. Build your own MCP servers. Orchestrate from LangGraph. Security done properly.	Custom MCP server + multi-tool agent
7	16–17 12 hrs	LLMOps & Production Prompt versioning, logging, tracing with LangSmith and LangFuse. RAGAS, DeepEval. Cost, latency, caching. FastAPI, Docker, AWS EC2.	Evaluated, containerised app live on AWS
8	18–20 18 hrs	Capstone — Production Application Three sprints: architecture and design → implementation, testing, deployment, observability → presentation, code review, and portfolio prep.	A live, deployed AI application + GitHub repo, documentation, and demo video
★	21 6 hrs	Microsoft AI Tools Module ★ PREMIUM ONLY Two live classes on Microsoft Copilot across Microsoft 365 and GitHub, plus building a custom copilot with Copilot Studio.	Custom copilot built in Copilot Studio + Microsoft co-branded certificate

12 Weeks · 66 Live Hours · 1 Deployed Application

Curriculum is indicative and subject to minor revisions. Week 21 is available to Premium learners only.

Learn From Practising Engineers

Every session is live. You ask, they answer — in the class, not in a comment thread.

Your Questions. Answered.

Everything a student, parent, or counsellor needs to know before deciding.

Q1 Do I need prior coding or AI knowledge?

No. Python is taught from the very first line, across four dedicated weeks. No prior coding or AI experience is assumed.

Q2 I am from a non-CS background. Can I still do this?

Yes. Every concept builds progressively from scratch. The only real expectation is that you put in the hours during the Python weeks.

Q3 How much time will this take each week?

Live sessions run on Saturday and Sunday. Plan for 6 live hours plus 4–6 hours of self-work per week, across 5 months.

Q4 What is the difference between Basic and Premium?

Both include the same core program, full AI Labs access, the capstone, recordings, and PW Skills + NSDC certification. Premium adds the Microsoft AI Tools module with a co-branded certificate, 20 projects instead of 10, 2 AI mock interviews, 5 career guidance sessions, and the recorded soft skills library.

Q5 What if I miss a live session?

Every session in both plans is recorded and available throughout your 24-month access period.

Q6 Does the program include real projects?

Yes. A hands-on mini project after every module, plus a 3-week production capstone where you design, build, deploy, and present a complete AI application. Basic includes 10 library projects, Premium 20.

Q7 Does this include placement assistance?

No. This is a skills and portfolio program, not a placement program. You finish with a deployed AI application, a GitHub portfolio, and government-recognised certification — the interviews you land are yours to earn.

Q8 Will I receive a certificate, and is it recognised?

Yes. On meeting the criteria — 70% attendance and 60% in quizzes, assignments, and capstone — you receive a PW Skills + NSDC certificate, backed by the Government of India and verifiable via a unique shareable link.

Q9 What exactly is the Microsoft component?

Premium learners get a dedicated Microsoft AI Tools module in Week 21 — two live classes on Microsoft Copilot across Microsoft 365 and GitHub, plus building a custom copilot with Copilot Studio. Completing it earns a Microsoft co-branded certificate.

Q10 Does this cover fine-tuning or classical machine learning?

No. This program focuses on AI engineering — building applications on top of LLMs — not model training. Fine-tuning, LoRA/QLoRA, classical ML, and deep learning are not covered.

Q11 What about payment, refunds, and access?

Both plans are a single upfront payment, inclusive of GST — no EMI. We follow a strict no-refund policy, though a one-time deferment to a later batch is allowed within 30 days of purchase. Access to all material runs for 24 months.

Five Months From Now, You Will Have Built It.

A production AI application. Live. Deployed. Yours to defend in any interview.
